PROFESSIONAL SUMMARY

Computer Engineering graduate (CGPA 9.13) with hands-on experience building full-stack web applications using the MERN stack. Skilled in developing REST APIs, JWT-based authentication, and responsive React interfaces. Recent work goes beyond that stack: a tool-calling LLM agent, a realtime app on WebSockets, and a React Native build. Looking for full-stack or backend work where I own features end to end.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL.
- **Backend:** Node.js, Express, REST API design, JWT auth.
- **Databases:** MongoDB, MySQL, PostgreSQL.
- **Frontend:** React, Next.js, Tailwind CSS, HTML/CSS.
- **AI:** LLM API integration, tool-calling agents, LangGraph.
- **Dev Tools:** Git, GitHub, Vercel, Postman.

PROJECTS

Trackr - Personal Finance Tracker | *React, Node, Express, MongoDB, Gemini API* [GitHub](#)

- Built field-level encryption for transaction amounts using AES-256-CBC with a per-value random IV, and computed dashboard aggregates in the application layer since MongoDB cannot sum ciphertext.
- Chose a single multimodal Gemini call over OCR-then-parse for bill scanning, avoiding error compounding when OCR misreads digits. Added JWT auth, recurring payments, CSV/PDF export and an installable PWA.

Spending Agent | *Node.js, LangGraph, MongoDB* [GitHub](#)

- Built a terminal agent that answers natural-language questions about spending by choosing among four tools across multiple rounds, each call's arguments depending on the previous result.
- Constrained every reported figure to come from a tool call rather than model knowledge, and committed full execution traces to the repo.

Find My Crew | *Next.js, TypeScript, Socket.io, Leaflet* [GitHub](#)

- Built a realtime PWA where a group shares a code and tracks each other live on a map, with a compass-driven direction arrow and live distance.
- Deployed the realtime server separately from the web app because Socket.io needs one long-lived process holding every connection open, which serverless cannot provide.

EXPERIENCE

Krishna Valley Power Pvt Ltd

Full Stack Intern

Mumbai • Dec 2024 - Jan 2025

- Built full-stack features in React and Node/Express inside an existing production codebase.
- Debugged and fixed integration failures between React components and REST endpoints.

SDE Intern

Mumbai • Jan 2024 - Mar 2024

- Built reusable React UI components for an internal JavaScript tool.
- Performed functional testing across release cycles.

EDUCATION

Thakur College of Engineering and Technology

Dec 2021 - May 2025

B.E., Computer Engineering

Mumbai, India

- **CGPA:** 9.13

ACHIEVEMENTS

- **Technovate Hackathon:** led a team to 2nd runner-up with an AI platform that scans utility bills to compute per-user EcoScores.
- Presented 4 research papers across 3 topics at **Multicon-W (2022–2025)**, the annual college research conference.
- **Smart India Hackathon:** cleared college-level selection with Briefify, an AI meeting summariser with action-point extraction.
- **Solo National Hackathon:** built a drag-and-drop no-code website builder.
